The TI96 & TI97 are both high performance, dual frequency transducers offering a versatile sounding system with high resolution and excellent range performance.

The design features both HIGH and LOW frequency sections combined in a single housing.

The combination of both frequencies in the same unit, provides the echo-sounder manufacturer and hydrographer with the flexibility to select a system to meet the desired survey requirements of resolution, range, silt penetration and beam pattern.

The NEPTCAST® over-moulded polyurethane housing provides a mechanically robust, corrosion free transducer for hull or over-side mounting.
