All dimensions in mm

The T335 is a single piston transducer offering a high power, broad band performance at an affordable price.

With a nominal operating frequency range from 2 kHz to 8 kHz transducers can be configured to form half lambda spaced arrays.

The robust design is tolerant of both dynamic and static pressure making it particularly suitable for Military applications.

The T335 is fitted with a standard internal tuning network to achieve the transmit response Illustrated overleaf.

Alternative tuning arrangements providing different responses can be fitted upon request. The standard connector is an in-line Subconn type IL2M, alternative connectors are available.
