

TC4037

- High receiving voltage sensitivity
- Differential signal output
- Wide useable frequency
- Long term stability
- Omnidirectional in all planes
- Resistant to high static pressure
- Individually calibrated

The TC4037 hydrophone sensor module provides a differential balanced output signal. It has been designed especially for operation with a differential preamplifier.

The use of differential sensor signals offers advantages such as, limitation of DC offset and fluctuation. It further adds 6dB more sensor sensitivity, -reduces noise distortion and makes the sensor less sensitive to vibration, temperature.

The mounting support is equipped with sealing o-rings that allows for convenient waterproof mounting.

NBR means Nitrile Rubber

The NBR rubber is first of all resistant to sea and fresh water but also resistant to oil. It is limited resistant to petrol, limited resistant to most acids and will be destroyed by base, strong acids, halogenated hydrocarbons (carbon tetrachloride, trichloroethylene), nitro hydrocarbons (nitrobenzene, aniline), phosphate ester hydraulic fluids, Ketones (MEK, acetone), Ozone and automotive brake fluid.

Metal body: TC4037-2 Aluminium alloy Al Mg1Si – If installed on a metal housing it is important that the housing is made of a similar material.
